1.5 OWNER OF THE DECLARATION

Declaration owner: Gustavsberg AB

Address: Odelbergsväg 11, 13440 Gustavsberg, Sweden

E-mail: info@orasgroup.com

Website: <https://www.gustavsberg.com/>

Production location: Xiamen Delmei Sanitary Ware Co., Ltd.

Address production location: 700-702, Caotang Rd, Tongan District, 361100 Xiamen, China

1.6 VERIFICATION OF THE DECLARATION

The independent verification is in accordance with the ISO 14025:2011. The LCA is in compliance with ISO 14040:2006 and ISO 14044:2006. The EN 15804+A2:2019 serves as the core PCR.

1.9 COMPARABILITY

In principle, a comparison or assessment of the environmental impacts of different products is only possible if they have been prepared in accordance with EN 15804+A2:2019.

1 General information

For the evaluation of the comparability, the following aspects have to be considered in particular: PCR used, functional or declared unit, geographical reference, the definition of the system boundary, declared modules, data selection (primary or secondary data, background database, data quality), scenarios used for use and disposal phases, and the life cycle inventory (data collection, calculation methods, allocations, validity period). PCRs and general program instructions of different EPD program operators may differ. Comparability needs to be evaluated. For further guidance, see EN 15804+A2:2019 and ISO 14025.

1.10 CALCULATION BASIS

LCA method R<THINK: Ecobility Experts | EN15804+A2

LCA software*: Simapro 9.6

Characterization method: RETHINK characterization method (see references for more details)

LCA database profiles: ecoinvent (for version see references)

Version database: v3.20e (2026-03-29)

** Simapro is used for calculating the characterized results of the Environmental profiles within R<THINK.*

1.11 LCA BACKGROUND REPORT

This EPD is generated on the basis of the LCA background report 'Gustavsberg Shower column kit 2.2' with the calculation identifier ReTHiNK-139553.

2 Product

2.1 PRODUCT DESCRIPTION

This worst-Case EPD refers to Shower Column kit 2.2 including a thermostatic mixer. The product is manufactured in a lead-free configuration and features a chrome-plated surface finish. The Shower column kit is designed with a timeless and harmonized aesthetic suitable for a wide range of bathroom environments. The set includes a PVC-free shower hose with a nominal length of 1.75 m, as well as an integrated storage shelf equipped with practical hooks.

Weight of the product including thermostatic mixer: 4.93 kg

The product is delivered in packaging made of corrugated cardboard, which should be recycled.

The following articles (without thermostatic mixers) are included in the EPD:

Article code	Name
GB412123300	Shower column kit Nautic 2.2, 150 c-c
GB412023300	Shower column kit Nautic 2.2, 160 c-c
GB412024300	Shower column kit Nautic 2.2, 40 c-c
GB412113300	Shower column kit Atlantic 2.2, 150 c-c
GB412013300	Shower column kit Atlantic 2.2, 160 c-c
GB41211330053	Shower column kit Atlantic 2.2, 150 c-c
GB41201330053	Shower column kit Atlantic 2.2, 160 c-c

Included thermostatic mixers are:

Article code	Article weight (kg/piece)
GB412024020	1.79
GB412123020	1.71
GB412023020	1.67
GB41211302	1.65
GB41201302	1.61

Thermostatic mixer with the article code GB412024020 is considered as the worst-case product among the thermostatic mixers and is included in the calculation.

The composition of the product is shown as follows.

Material	Share (%)
Stainless steel	38.92
Brass	35.18
ABS (Acrylonitrile Butadiene Styrene)	11.98
EPDM (Ethylene Propylene Diene Monomer)	3.17
PMMA (Polymethyl Methacrylate)	2.93
POM (Polyoxymethylene)	2.52
TPR (Thermoplastic Rubber)	1.46
Polyethylene	0.7
PPA (Polyphthalamide)	0.6
Other materials	2.54

2.2 APPLICATION (INTENDED USE OF THE PRODUCT)

Shower column kit is a system of bathroom components used to facilitate personal cleaning under a flow of water. Its primary application is to provide a sanitary and relaxing showering experience in a bathroom. The integrated thermostatic mixer ensures stable water temperature control during operation. The product is classified as Energy Class A in accordance with SS 820001 and is designed to enable efficient use of water and energy during the use phase. The three-function hand shower incorporates an anti-calcification system intended to reduce calcium deposits and facilitate maintenance. The maximum flow rates are 6 and 7 liters per minute, depending on the selected function.

2.3 REFERENCE SERVICE LIFE

RSL PRODUCT

The declaration of reference service life (RSL) is not mandatory as the use stage (Module B) is not included in this EPD. Spare parts are provided for the products for at least 10 years after the product has been discontinued. For the RSL, 10 years are used for Gustavsberg Shower column kit 2.2 in this EPD.

USED RSL (YR) IN THIS LCA CALCULATION:

10

2.4 TECHNICAL DATA

Max. tap capacity (at 300 kPa): 0.117 l/s

2 Product

Pressure loss with flow (0.1 l/s) 220 kPa

2.5 SUBSTANCES OF VERY HIGH CONCERN

The product does not contain any substances with particularly hazardous properties (Substances of Very High Concern, SVHC) that are included in the candidate list in a concentration exceeding 0.1% by weight.

2.6 DESCRIPTION PRODUCTION PROCESS

The manufacture of Gustavsberg Shower column kit 2.2 takes place in Tong'an, Xiamen (China).

The production includes following steps:

1. Manufacturing of plastic components: Injection moulding of ABS components
2. Manufacturing of stainless steel components: Cutting, machining, welding and polishing of stainless steel pipes
3. Surface treatment processes: Electroplating of selected plastic and metal components
4. Assembly
5. Packaging

2.7 CONSTRUCTION DESCRIPTION

The product is installed manually. Prior to installation the lines must be flushed up to the faucet. The faucet is connected with the cold water line on the right and the hot water line on the left. Water pressure: max 1000 kPa, min 50kPa. Hot water temperature: max 70°C, min 45°C.

3 Calculation rules

3.1 DECLARED UNIT

piece

According to the PCR, the declared unit is one piece shower set.

Reference unit: piece (p)

3.2 CONVERSION FACTORS

Description	Value	Unit
Reference unit	1	p
Weight per reference unit	4.930	kg
Conversion factor to 1 kg	0.202840	p

3.3 SCOPE OF DECLARATION AND SYSTEM BOUNDARIES

This is a Cradle to gate with options, modules C1-C4 and module D EPD. The life cycle stages included are as shown below:

(X = module included, ND = module not declared)

A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	ND	ND	ND	ND	ND	ND	ND	X	X	X	X	X

The modules of the EN 15804 contain the following:

Module A1 = Raw material supply	Module B5 = Refurbishment
Module A2 = Transport	Module B6 = Operational energy use
Module A3 = Manufacturing	Module B7 = Operational water use
Module A4 = Transport	Module C1 = De-construction / Demolition
Module A5 = Construction - Installation process	Module C2 = Transport
Module B1 = Use	Module C3 = Waste Processing
Module B2 = Maintenance	Module C4 = Disposal
Module B3 = Repair	Module D = Benefits and loads beyond the product system boundaries
Module B4 = Replacement	

3.4 REPRESENTATIVENESS

This EPD is representative for Gustavsberg Shower column kit 2.2, a product of Gustavsberg AB. The results of this EPD are representative for European Union. Input materials are representative for China.

3.5 CUT-OFF CRITERIA

For each unit process, the cut-off criteria of 1% of renewable and non-renewable primary energy usage and 1% of the total mass input of that unit process are complied with. The total neglected input flows do not exceed the limit of 5% of energy use and mass.

3 Calculation rules

Product stage (A1-A3)

All input flows (e.g. raw materials, transportation, energy use, packaging, etc.) and output flows (e.g. production waste) are considered in this LCA.

Construction process stage (A4-A5)

All input flows (e.g. transportation to the construction site, additional raw material use for construction, installation energy (use) of energy use for assembly, etc.) and output flows (e.g. construction waste, packaging waste, etc.) are considered in this LCA.

End of life stage (C1-C4)

All input flows (e.g. energy use for demolition or disassembly, transport to waste processing, etc.) and output flows (e.g. end-of-life waste processing of the product, etc.) are considered in this LCA. Demolition of the product is accomplished using hand tools with no associated emissions and negligible impacts.

Benefits and loads beyond the system boundary (Module D)

All benefits and loads beyond the system boundary resulting from reusable products, recyclable materials and/or useful energy carriers leaving the product system are considered in this LCA.

The following processes are excluded:

- Manufacturing of equipment used in production, buildings or any other capital asset
- Water and electricity consumption for the building
- Transportation of personnel to the plant
- Transportation of personnel within the plant
- Research and development activities
- Long-term emissions

3.6 ALLOCATION

The energy consumption is calculated based on the total consumption at the production site in 2024 (for all products manufactured) and are converted into the amount used solely for the production of the declared product. The amount of energy is given per piece of product manufactured.

No allocation is performed with regard to the use of secondary materials or fuels, co-products, plant-specific production processes or multi-input systems.

The polluter pays principle applies to the use of waste as a substitute for primary fuels or materials. Double counting is avoided.

3.7 DATA COLLECTION & REFERENCE PERIOD

All process-specific data are collected for the reference year 2024 (01.01.2024 - 31.12.2024).

3.8 ESTIMATES AND ASSUMPTIONS

For all raw materials used (raw materials, operating materials, packaging), a conservative approach for the transportation from suppliers (module A2) is applied. A distance of 3500 km by truck is considered for all components manufactured by the local suppliers in China. A payload factor of 50% is used for truck transports (suppliers, disposal transports and internal transports), which corresponds to a full delivery and empty return journey.

Excluded are the manufacturing of capital equipment, construction undertakings, and infrastructure development, along with the maintenance and operation of capital equipment. Additionally, activities related to personnel, as well as energy and water consumption associated with company management and sales, are also excluded.

For production waste in module A3, it is assumed that 5% of input raw materials are considered as production waste during the manufacturing process.

For module A4 (Transportation from the production gate to the construction site), it is estimated that the international transport includes 19000 km by ship and 1000 km by lorry (85% payload). The transport distances for all logistics stages in module A4 have been aggregated into a combined dataset for software compatibility.

The published EPD "Gustavsberg Thermostatic bath and shower mixers" (EPD registration number: S-P-09174) is used in this calculation to represent the thermostatic mixer.

The scenarios included are currently in use and are representative for one of the most likely scenario alternatives.

3.9 DATA QUALITY

The data are based on the annual average. Generic datasets from the ecoinvent database V3.9.1 are used for the secondary data, which refers to reference year 2022. This database is regularly maintained and meets the requirements of EN 15804+A2 (background data not older than 10 years). All consistent datasets contained in the ecoinvent database are documented and can be viewed in the online ecoinvent documentation. In the operating data survey all relevant process-specific data could be collected. The quality of the data can be thus considered as good.

3 Calculation rules

The primary data are collected and provided by **Gustavsberg AB** and most of the datasets selected in the LCA for raw materials refer to **Rest-of-the-World** as the geographical reference, representing the average global production.

Aspect	Data quality assessment
Time-related coverage	The primary data represent the current situation of the date of study (2024) or as close as possible (<5 years). The secondary data are updated within last 10 years.
Geographical coverage	Most of the datasets selected for the LCA refer to Rest-of-the-World as the geographical reference, representing the average global production.
Technology coverage	The data are representative of the technology used in production processes.
Completeness	Specific data are benchmarked with literature data. Simple validation checks (e.g. mass or energy balances) are performed. As the primary data regarding transportation in China is not

available, a conservative scenario is applied, assuming a transport distance of 3500 km by lorry.

Representativeness	The data fulfill the defined time-related, geographical, and technological scope.
Precision	The data used are as representative as possible. The data are derived from credible sources, and references are provided.
Reproducibility	Information about the method and data (reference source) are provided.
Sources of the data	The data are derived from credible sources, and references are provided.

3.10 POWER MIX

In this EPD, the national power mix of China is considered in the calculation of the environmental impacts, referring to the location-based approach. No CO2 certificates are considered. The GWP-total of the electricity is calculated as 0.97 kg CO2 eq./kWh.

4 Scenarios and additional technical information

4.1 TRANSPORT TO CONSTRUCTION SITE (A4)

For the transport from production place to assembly/user, the following scenario is assumed for module A4 of this EPD.

	Value and unit
Vehicle type used for transport	International transport (19000 km by ship and 1000 km by lorry (85% payload))
Fuel type and consumption of vehicle	
Distance	1 km
Capacity utilisation (including empty returns)	
Bulk density of transported products	
Volume capacity utilisation factor	

4.2 ASSEMBLY (A5)

The following information describes the scenarios for flows entering the system and flows leaving the system at module A5.

FLOWS ENTERING THE SYSTEM

There are no significant environment impacts as a result of materials or energy used in the construction stage (A5).

FLOWS LEAVING THE SYSTEM

The following output flows leaving the system at module A5 are assumed.

Description	Value	Unit
Output materials as result of loss during construction	0	%
Output materials as result of waste processing of materials used for installation/assembly at the building site	0.000	kg
Output materials as result of waste processing of used packaging	0.500	kg

4.3 DE-CONSTRUCTION, DEMOLITION (C1)

No inputs are needed for the product at the de-construction / demolition phase

4.4 TRANSPORT END-OF-LIFE (C2)

The following distances and transport conveyance are assumed for transportation during end of life for the different types of waste processing.

4 Scenarios and additional technical information

Waste Scenario	Transport conveyance	Not removed (stays in work) [km]	Landfill [km]	Incineration [km]	Recycling [km]	Re-use [km]
(ei3.9.1) Metals, mixed (via residue (NMD ID 49)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) Metals, others (i.a. fasteners, fittings) (NMD ID 50)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) finishes (adhered to wood, plastic, metal) (NMD ID 2)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) copper (i.a. sheets, pipes) (NMD ID 41)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) elastomeres (i.a. epdm) (i.a. roofing, foils) (NMD ID 20)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) plastics, via residue (NMD ID 43)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50
(ei3.9.1) polyolefines (i.a. pe,pp) (i.a. pipes, foils) (NMD ID 57)	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	50

The transport conveyance(s) used in the scenario(s) for transport during end of life has the following characteristics.

	Value and unit
Vehicle type used for transport	(ei3.9.1) Lorry (Truck), unspecified (default) market group for (GLO)
Fuel type and consumption of vehicle	not available
Capacity utilisation (including empty returns)	50 % (loaded up and return empty)
Bulk density of transported products	inapplicable
Volume capacity utilisation factor	1

4.5 END OF LIFE (C3, C4)

The scenario(s) assumed for end of life of the product are given in the following tables. First the assumed percentages per type of waste processing are displayed, followed by the assumed amounts.

4 Scenarios and additional technical information

Waste Scenario	Region	Not removed (stays in work) [%]	Landfill [%]	Incineration [%]	Recycling [%]	Re-use [%]
(ei3.9.1) Metals, mixed (via residue (NMD ID 49)	NL	0	5	5	90	0
(ei3.9.1) Metals, others (i.a. fasteners, fittings) (NMD ID 50)	NL	0	5	5	90	0

Total	0.000	0.273	1.154	3.503	0.000

4.6 BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARY (D)

The presented Benefits and loads beyond the system boundary in this EPD are based on the following calculated Net output flows in kilograms and Energy recovery displayed in MJ Lower Heating Value.

Waste Scenario	Net output flow [kg]	Energy recovery [MJ]
(ei3.9.1) Metals, mixed (via residue (NMD ID 49)	0.865	0.000
(ei3.9.1) Metals, others (i.a. fasteners, fittings) (NMD ID 50)	1.219	0.000
(ei3.9.1) finishes (adhered to wood, plastic, metal) (NMD ID 2)	0.000	18.845
(ei3.9.1) copper (i.a. sheets, pipes) (NMD ID 41)	0.098	0.000
Total	2.195	29.953

4 Scenarios and additional technical information

Waste Scenario	Net output flow [kg]	Energy recovery [MJ]
(ei3.9.1) elastomeres (i.a. epdm) (i.a. roofing, foils) (NMD ID 20)	0.011	5.312
(ei3.9.1) plastics, via residue (NMD ID 43)	0.000	5.134
(ei3.9.1) polyolefines (i.a. pe,pp) (i.a. pipes, foils) (NMD ID 57)	0.002	0.662
Total	2.195	29.953

5 Results

For the impact assessment long-term emissions (>100 years) are not considered. The results of the impact assessment are only relative statements that do not make any statements about end-points of the impact categories, exceedance of threshold values, safety margins or risks. The following tables show the results of the indicators of the impact assessment, of the use of resources as well as of waste and other output flows.

CLASSIFICATION OF DISCLAIMERS TO THE DECLARATION OF CORE AND ADDITIONAL ENVIRONMENTAL IMPACT INDICATORS

ILCD classification	Indicator	Disclaimer
ILCD type / level 1	Global warming potential (GWP)	None
	Depletion potential of the stratospheric ozone layer (ODP)	None
	Potential incidence of disease due to PM emissions (PM)	None
ILCD type / level 2	Acidification potential, Accumulated Exceedance (AP)	None
	Eutrophication potential, Fraction of nutrients reaching freshwater end compartment (EP-freshwater)	None
	Eutrophication potential, Fraction of nutrients reaching marine end compartment (EP-marine)	None
	Eutrophication potential, Accumulated Exceedance (EP-terrestrial)	None
	Formation potential of tropospheric ozone (POCP)	None
	Potential Human exposure efficiency relative to U235 (IRP)	1
	Abiotic depletion potential for non-fossil resources (ADP-minerals&metals)	2
ILCD type / level 3	Abiotic depletion potential for fossil resources (ADP-fossil)	2
	Water (user) deprivation potential, deprivation-weighted water consumption (WDP)	2
	Potential Comparative Toxic Unit for ecosystems (ETP-fw)	2
	Potential Comparative Toxic Unit for humans (HTP-c)	2
	Potential Comparative Toxic Unit for humans (HTP-nc)	2

5 Results

ILCD classification	Indicator	Disclaimer
	Potential Soil quality index (SQP)	2
Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.		
Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.

5 Results

5.3 INFORMATION ON BIOGENIC CARBON CONTENT PER PIECE

BIOGENIC CARBON CONTENT

The following Information describes the biogenic carbon content in (the main parts of) the product at the factory gate per piece:

Biogenic carbon content	Amount	Unit
Biogenic carbon content in the product	0	kg C
Biogenic carbon content in accompanying packaging	0.2273	kg C

UPTAKE OF BIOGENIC CARBON DIOXIDE

The following amount of carbon dioxide uptake is taken into account. Related uptake and release of carbon dioxide in downstream processes are not taken into account in this number although they do appear in the presented results. One kilogram of biogenic Carbon content is equivalent to 44/12 kg of biogenic carbon dioxide uptake.

Uptake Biogenic Carbon dioxide	Amount	Unit
Packaging	0.8333	kg CO2 (biogenic)

6 Interpretation of results

In most impact categories, the environmental impact of Gustavsberg Shower column kit 2.2 is predominantly determined by the extraction and processing of raw materials (module A1), followed by the manufacturing processes (module A3). Among the raw materials (module A1), stainless steel results in the largest environmental impact, accounting for 48.5% of the GWP-total.
