

# **E-ZIG-MAT-P1**

## **ZigBee Water Detection Mat**

---

Datasheet

# Overview

The elementric water detection mat, senses small water leaks using an embedded conductive tracks within the mat to detect the presense of water. The system comprises of

1. The water sensing mat
2. Water Sensing cable
3. The Low Energy detection circuit with inbuilt zigbee radio transmitter.

This mat is designed to be placed under a sink or under an appliance, ex a dishwasher, washing machine, fridge.
