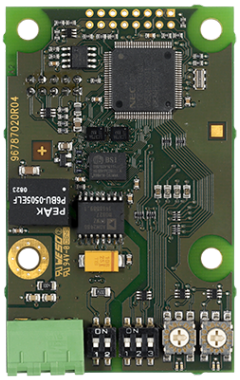
	1	**CIM 200 Modbus interface module**



Note! Product picture may differ from actual product

Product No.: 96824796

Communication interface for Modbus for automation.

The CIM 200 is a standard interface for data transmission between a Modbus RTU network and a Grundfos pump. It makes data exchange possible between Grundfos pump and a PLC or SCADA system.

Extensive amounts of datapoints are available from each product via the CIM 200. The interface offers uncomplicated system integration with both new and legacy systems, as the Modbus RTU protocol is widely supported by existing control systems and PLCs.

The CIM 200 is an add-on communication module installed internally in the Grundfos product.

Supported products:
- E-pump types up to 2.2 kW and E-pump types at or above 11 kW
- MAGNA3 circulators
- CU 352 MPC controller
- CU 354 DDD controller
- CU 362 Dedicated Controls for sewage pumps
