

HOUSELINER®

LINER SYSTEM EPOXY, LINER & UV-RESIN

SACPARTS BRANCH PIPES

In the Houseliner System, Sacparts branch pipes are always installed with an overlap. This will result in a seamless waste water pipe system that is 100% leak free. Installing branch pipes will give a superior advantage and guarantee the quality for many years.

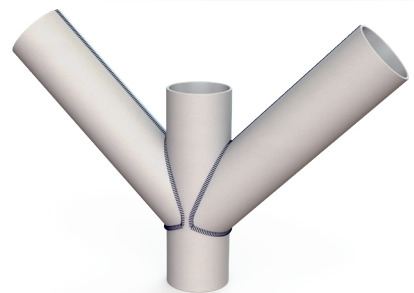

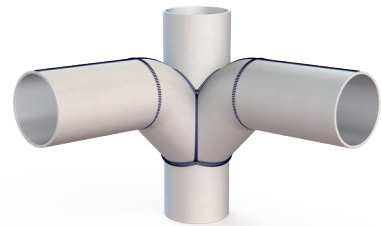

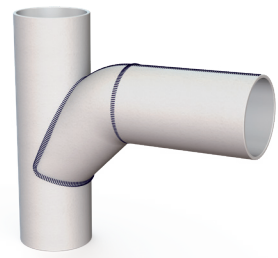

Sacparts provide a form-fitting solution for lateral and horizontal pipes connections. From a diameter of 30 mm up to 300 mm. When using our branch pipe tools and a formfitted brach pipe a quick, easy and reliable renovation will be achieved even on sewer pipes in poor condition.

- Form-fitted brach pipes for renovation of existing branch pipes.
- Standard DN sizes are from 50 mm up to 225 mm in the main pipe.
- DN from 50 mm up to 225 mm in the branch pipe connection.
- Standard length of the connection is 30 - 40 cm depending on brach pipe dimensions.
- Flexible and secure connection
- For a leak-free and easy installation.

Sacparts Branch Pipes together with Sactools Packer Covers and Cover Holders are produced in a large variety of sizes and models. Can be customized to suit your requirement.

We design, develop, manufacture and has a stock of materials and tools for installation of branch pipes.

We know what it takes to get a perfect result.

FACTS ON SACPARTS BRANCH PIPES

- Sacpart branch pipes consists of polyester felt and a PU coating.
- For optimal results, the branch pipe is impregnated with epoxy from Houseliner, which is a requirement for the material warranty.
- It is developed to be installed together with liner and epoxy from Houseliner.
- The branch pipe shall be installed after the liner is installed in the main pipe.
- It can be used without liner when repairing a single leak.
