

Data sheet

2/2-way assisted lift operated solenoid valve type EV250B

EV250B with assisted lift can operate from zero and up to 10 bar differential pressure. This 2/2-way valve program is especially to use in closed circuits with low differential pressure, but demanding moderate flow rates. Valve body in dezincification resistant brass for ensuring a long life even in connection with aggressive steam media. EV250B is compatible with the broad Danfoss coil program with enclosures from IP00 up to IP67. Medium temperatures up to 140 °C (low pressure steam).

Features and versions:

- For water, oil, compressed air and similar neutral media
- Flow range: 0.5 – 20 m³/h
- Differential pressure: 0 – 10 bar
- Media temperature from -30 – 140 °C
- Ambient temperature: Up to 80 °C
- Coil enclosure: Up to IP67
- Viscosity: Up to 50 cst
- The valve can be used for rough vacuum
- Water hammer damped
- Thread connections: From G 3/8 – G 1
- DN 10 – 22
- DZR brass version in NC and NO
- Also available with NPT thread

Spare parts kit for NC EPDM seal material

For valve type	Seal material	Code number
EV250B 10 - 12BD	EPDM	032U5315
EV250B 18 - 22BD	EPDM	032U5317

The spare parts kit comprises:

O-ring for coil
4 screws
Complete NC actuator unit with:
Diaphragm
Assist spring
Armature
Closing spring
Cover
Armature tube

Spare parts kit for NC FKM seal material

For valve type	Seal material	Code number
EV250B 10 - 12BD	FKM	032U5271
EV250B 18 - 22BD	FKM	032U5273

Function NC

1. Coil
2. Armature
3. Closing spring
4. Valve plate
5. Pilot orifice
6. Diaphragm
7. Main orifice
8. Equalizing orifice
9. Assisted lift

Coil voltage disconnected (closed):

When the supply voltage to the coil (1) is disconnected, the valve plate (4) is pressed down against the pilot orifice (5) by the closing spring (3). The pressure across the diaphragm (6) is built up via the equalizing orifice (8). The diaphragm closes the main orifice (7) as soon as the pressure across the diaphragm is equivalent to the inlet pressure below, due to the larger diameter of the upper side and/or the tension of the closing spring (3). The valve will be closed as long as the voltage to the coil is disconnected.

Coil voltage connected (open):

When voltage is applied to the coil, the armature (2) and the valve plate (4) are lifted clear of the pilot orifice (5).

If there is a differential pressure across the valve, the pressure above the diaphragm (6) drops as the pilot orifice is larger than the equalizing orifice. Therefore the diaphragm is lifted clear of the main orifice (7). If there is no differential pressure across the valve, the armature (2) draws the diaphragm (6) clear of the main orifice (7) using the assisted lift (9). The valve will be open for as long as there is voltage to the coil.

Function NO

1. Coil
2. Closing spring
3. Armature
4. Spindle
5. Opening spring
6. Armature stop
7. Valve plate
8. Assisted lift
9. Pilot orifice
10. Diaphragm
11. Equalising orifice
12. Main orifice

Coil voltage disconnected (valve is open):

When the supply voltage to the coil (1) is disconnected, the valve plate (7) are lifted clear of the pilot orifice (9) if there is a differential pressure across the valve. The pressure above the diaphragm (10) drops as the pilot orifice is larger than the equalizing orifice. Therefore the diaphragm is lifted clear of the main orifice (12).

If there is no differential pressure across the valve, the opening spring (5) draws the diaphragm (10) clear of the main orifice (12) using the assisted lift (8). The valve will be open for as long as there is no voltage to the coil.

Coil voltage connected (valve is closed):

When the supply voltage to the coil (1) is connected, the armature (3) will compress the opening spring (5) and the closing spring will push the spindle (4)/ valve plate down against the pilot orifice (9). The pressure across the diaphragm (10) is built up via the equalising orifice (11). The diaphragm closes the main orifice (12) as soon as the pressure across the diaphragm is equivalent to the inlet pressure below, due to the larger diameter of the upper side and / or the tension of the closing spring (2). The valve will be closed as long as coil voltage is connected.
