SICHERHEITS- UND REGELARMATUREN

Hans Sasserath GmbH & Co. KG · Postfach 11 51 · D-41335 Korschenbroich

Information pursuant to Article 33 of the REACH Regulation "Directive (EC) No. 1907/2006"

We place great demands on our products in terms of quality and safety. Of course, this also means that we only offer products containing materials and ingredients that are proven and approved.

The European chemicals regulation REACH is intended to ensure a high level of protection for people and the environment. REACH requires manufacturers, importers and downstream users to register their chemicals and be responsible for their safe use.

We hereby confirm that, according to the information available to us, our products or the items contained therein do not contain any substances in concentrations exceeding 0.1% by weight that meet the criteria of Article 57 of the REACH Regulation and have been identified in accordance with Article 59(1) of the REACH Regulation. The only exception is lead (on the candidate list since the end of June 2018).

It is not always possible to avoid using substances which meet the criteria of Article 57 of the REACH Regulation when considered in isolation and which have been identified in accordance with Article 59(1) of the REACH Regulation. In this respect, our products contain components made of alloys containing more than 0.1% (w/w) lead (EC number: 231-100-4, CAS number: 7439-92-1). As lead is bound as an alloying component and therefore no exposure is to be expected, no additional information on safe use is required.

All materials used by us naturally comply with the valid specifications, regulations and standards, such as the UBA positive list, Elastomer Guideline, KTW Guideline...

Upon request, we will be happy to provide further detailed information on the products concerned.

Korschenbroich den 23.08.2018
