REACH

Registration, Evaluation, Authorisation and Restriction of Chemicals

POLOPLAST occupies itself with the topic "REACH" since 2004 and is engaged – in part actively – in promoting the necessary flow of information - as a member of the nationwide syndicates:

ETHIC (= European Thermoplastics Independent Compound-Manufacturer) and
TEPPFA (= The European Plastic Pipes and Fitting Association).

According to the guidelines of "REACH", POLOPLAST is a so-called „downstream user" as producer of compounds for preparations and as manufacturer of product. Based on today's regulations, POLOPLAST is by no means a "producer of substances" or an "importer". Furthermore polymers take an exceptional position within REACH; polymers including stabilizers with a mass fraction of below 2% are exempt from registration.

We assure you that all measures for promoting and supporting the necessary flow of information will be taken – from our customers to the manufacturers of substances or importers. The main goal is to guarantee the continuity of the deliveries to our customers.

At present we assume that all substances being part of the products delivered to our customers and due for registration have been pre-registered by our suppliers.

We further confirm that products being delivered to your company do not contain SVHC-substances – according to the current SVHC-nominee list of ECHA (European Chemicals Agency).

We can assure you that we will do our utmost to completely fulfil the REACH guidelines in time.

DI Markus Nösterer
Head of IMS and Production Process Optimisation
